
Exposure–response associations of EVI and O₃ with biological ageing
a
Predicted BAA (years)
4-year mean EVI (1 km)
Spline estimate
Primary linear estimate
b
Predicted BAA (years)
4-year mean O₃ (μg m⁻³)
Spline estimate
Primary linear estimate
c
Joint additive prediction surface
4-year mean O₃ (μg m⁻³)
4-year mean EVI (1 km)
Predicted BAA (years)
N = 5,914 observations. Shading: IQR; lower ticks: binned exposure counts. Grey cells: outside the observed data cloud.
